¹Senior Lecturer, Lancashire Law School, University of Central Lancashire, United Kingdom.

²Principal Lecturer, Northumbria Law School, Northumbria University, United Kingdom.

³Jean Monnet Professor of European Union Law, University of Sheffield, United Kingdom.

We are grateful for the support of the University of Central Lancashire Law School, University of Northumbria Law School and University of Sheffield Law School for the excellent research assistance provided by James Cairns and Paul Dargue; for the comments and suggestions made at the HEA Annual Conference, Manchester, 2017 and the Society of Legal Scholars Annual Conference, Dublin, 2017; as well as for the insights of the many students with whom we have shared this project.

Abstract: The legal profession, in common with other professions, does not represent the diverse society it serves. In England and Wales, it is significantly more difficult to become a lawyer if you are not white, male, middle class, privately and Oxbridge educated: this is also true for other protected characteristics, such as disability, sexual orientation and age. The students we teach are fundamentally and structurally disadvantaged. This article reports on the aims and objectives of *The Fairness Project*, and the consequent design of its learning materials. Structural inequalities are all-pervasive and long-standing. No one project, no one generation, will secure equality, more diversity and fairness in the legal profession. But that is not a reason to do nothing. As educators and as human beings, who ourselves are relatively advantaged, we have a moral and pedagogical imperative to do what we can, where we are. That is what *The Fairness Project* is all about.

Keywords: equality and diversity; access to the legal profession; intersectional disadvantage; curriculum development; student awareness and agency

Introduction

There is no doubt that the legal profession, in common with other professions, does not represent the diverse society it serves. It is significantly more difficult to become a lawyer if you are not white, male, middle class, privately and Oxbridge educated than if you are. This is also true for other protected characteristics, such as disability, sexual orientation and age (or at least age on entering the profession). The difficulty gets more intense the further up the “career ladder” one climbs: if we look at the 12 UK Supreme Court judges, 10 are white men and 2 are white women; 9 were privately educated and 9 were Oxbridge educated.

Therefore, the undergraduate students we encounter in two post-92 universities and (although less so) one Russell Group university in the north of England are fundamentally and structurally disadvantaged when it comes to their stated career aspirations on entering Higher Education. *The Fairness Project*, designed by McKee and Nir at the University of Central Lancashire (UCLan) in 2015/2016 and adopted with some small modifications in precise mode of delivery by Alexander and Griffiths at the University of Northumbria and Hervey at the University of Sheffield,¹ stems from our reflections and action.

Our focus is not only on how we should educate our students to be realistic about where they stand in the competitive market for jobs in the legal profession, but also to enable them to act on that knowledge, develop their skill sets and profiles and devise personal strategies to overcome barriers, to construct a future career for themselves that brings together their aspirations with reality. In short, we are seeking to ensure our students understand the disadvantages they face, without “crushing their spirits”. Taking this further, for those among our students who do succeed, we are aiming to help them to become reflective lawyers and fairer recruiters or managers in the future, so that they do not contribute to perpetuating the cycles of disadvantage that they currently face.

Rationale and initial drivers for the project

The initial driver for *The Fairness Project* was a sense of moral compunction, arising from McKee and

Nir's observations and reflections as teaching staff at UCLan. They observed that UCLan students were experiencing declining traction in the graduate employment market. The recession, which began in 2008/2009,² led to a reduction in the number of training contracts offered by law firms, the traditional route from Higher Education into the profession of solicitor. Instead, law firms recruited increasing number of graduates into posts variously described as: paralegal and senior paralegal, legal assistant, legal support assistant, fee earner and case managers. Graduates reported working in an environment of capped salaries and in posts which were not transparent in terms of possible progression to qualification as a solicitor.

The data on training contract opportunities then, and now, remain stark. In 2015/2016, 15,950 students graduated with degrees in law from universities in England and Wales.³ However, only 5,728 trainee registrations were recorded.⁴

81.4 per cent of these training contracts were awarded to graduates from the 24 Russell Group universities.⁵ This pattern is not unique to England and Wales. In the United States, it has been argued that the legal profession is in crisis because it fails to prepare law students adequately for the challenges of legal practice.⁶ There is also evidence of an oversupply of law graduates in other jurisdictions such as Australia and Japan.⁷

The broader context

More broadly, despite the professed intentions of the regulatory authority for solicitors in England and Wales (the Solicitors Regulatory Authority (SRA))⁸ and for barristers (the Bar Standards Board (BSB)),⁹ both the quantitative and the qualitative data on equality and diversity within the legal profession reveal at best a position of stasis and, at worst, a picture of decline.¹⁰

Data collated by the SRA and the Law Society in autumn 2015¹¹ reveal the following. Women were awarded 62.8 per cent of new training contracts, accounted for 61.1 per cent of new admissions to the roll (ie, newly qualified solicitors), but made up only 29 per cent of partners. The average salary for a female solicitor was 19.2 per cent less than her white European male counterpart.

Data on ethnicity are less reliable.¹² We know that in 2014/2015, black Asian and minority ethnic (BAME) groups accounted for 27 per cent of new admissions to the roll.¹³ The total representation of BAME holders of PCs rose to 16 per cent in 2016.¹⁴ This is higher than the BAME percentage in the general population, which is 14.4 per cent.¹⁵ However, only 11.1 per cent of partners come from a BAME background.¹⁶ Further, 9.2 per cent of all BAME solicitors work as sole practitioners, compared to 3.9 per cent of white solicitors.¹⁷ Sole practitioner status brings with it the vulnerability of being a small business together with the related public indemnity insurance costs and elevated risk of breaching elements of the complex regulatory framework for legal services. The pay of BAME solicitors is 20 per cent less than that of white male equivalents.¹⁸

Socioeconomic background is pivotal in progression within the legal world, particularly at the most senior levels of the legal profession. Those educated at private fee-paying schools comprise seven per cent of the UK's general population. However, they account for 70 per cent of judges, 51 per cent of partners at "magic circle" firms¹⁹ and 23 per cent of lawyers in private practice.²⁰ In June 2015, the Social Mobility and Child Poverty Commission²¹ reported, drawing on qualitative interview data,²² that it is more difficult than ever for graduates from modest or poorer backgrounds to access every level of the professions of law and accountancy.²³ Moreover, despite efforts to improve social inclusion over the past 10–15 years, even entry to elite law firms or barristers' chambers continues to be dominated by people from more privileged socioeconomic backgrounds.²⁴ Indeed, this dominance has become *more* pronounced over the past 30 years. To become a solicitor or a barrister, graduates currently need a qualifying law degree (or conversion course), a postgraduate qualification (Legal Practice Course or Bar Professional Training Course) and a period of "workplace training" (two years' training contract or one-year "pupillage"). Competition for this stage of entry to the legal profession is fierce. There were 15,950 law graduates in 2015/2016. Yet, only 5,728 training contracts²⁵ and 882 pupillages were registered in that year.²⁶ Law firms tend to recruit most new trainee solicitors from a limited group of "elite" universities.²⁷ Students at these universities are more likely to have attended selective or fee-paying schools and/or to have come from affluent backgrounds.

Although the SRA has proposed changes to the education of lawyers (the Solicitors Qualifying Examination²⁸ (SQE)), which in turn may lead to changes in the way lawyers are recruited, for the most part in the larger law firms, trainee solicitors are recruited by increasingly complex and managed recruitment exercises. Potential trainees often have to participate in multifaceted recruitment techniques

such as psychometric testing, networking events and assessment centres. Dedicated Human Resource professionals and graduate recruitment specialists, with partner involvement particularly in the smaller law firms, often run these recruitment exercises. The increasingly systemised and managed process of recruitment has led to suggestions that law firms now recruit solely on merit and talent.²⁹ The contention is that the profession is thus becoming increasingly diverse. Law Society figures suggest that there are more women solicitors and solicitors from ethnic minority groups with PCs.³⁰ Nonetheless, discrimination endures. Discrimination based on gender, ethnicity and above all on social class,³¹ and particularly at the intersection of these characteristics,³² is not automatically eradicated by more managed recruitment processes.³³

As the Social Mobility and Child Poverty Commission report explains, “merit” or “talent” — sometimes presented as unproblematic concepts in recruitment contexts — is in fact highly ambiguous.³⁴ This ambiguity allows recruitment, and career progression, to be coded by reference to middle-class norms. Relevant proxy markers of potential include “drive”, “commitment to a legal career”, “strong communication skills” and above all “confidence”, “gravitas”, “poise” and “polish”.³⁵ Firms typically recruit using a two-stage process: a sift for intelligence, measured through A-level results³⁶ and psychometric tests, and a second stage focusing on “commitment to a legal career” and “polish”. A key marker of evidence of “commitment to a legal career” is relevant work experience. But access to such work experience is out of the reach of many students who lack the social networks to provide opportunities for law-related work experience.³⁷ “Polish” is exemplified by evidence of, for instance, debating skills and outward confidence. A perceived ability to relate to commercial clients is a key, as potential employees must show promise of generating high levels of fees for the firm in the future.

“[If I recruited somebody] ... she’s short of polish. We need to talk about the way she articulates, the way that she, first, chooses words and, second, the way she pronounces them. It will need, you know ... some polish because whilst I may look at the substance, you know, I’ve got a lot of clients and a lot of colleagues who are very focused on the personal presentation and appearance side of it.”³⁸

Recruiters interviewed by the Commission believed that it was more difficult for candidates from modest backgrounds to present with “polish”. Those with professional parents had a head start, due to their vocabulary, articulation, ability to name-drop and familiarity with the professional world:

“My kids go to a private school, they’re very articulate, they’re very confident, they’ve got me and their mum who work professionally and the people they meet are professionals and as they’ve come through the system and they come to apply for jobs, if they want to be lawyers ... they’ve got ten steps ahead ... they know people whose name they can drop into conversation, the environment they’ve been brought up in so much more lends itself to the criteria that firms are looking for.”³⁹

Environment here also includes educational environment: applicants who met these coded criteria were often Oxbridge educated. In short, applicants already have the skills to behave like stereotypical lawyers in a selection process. Recruiters thus believe that they come to the job already enabled to engage both with other lawyers and with clients.

“So communication will be one [characteristic], which will obviously come across in the interview, just by its very nature. Poise and gravitas in the room is part of that ... the people who will be the most confident are generally those who are from what people would see as a more stereotypical background for a City lawyer. They’ve grown up in a world where they feel more comfortable. They’ve probably engaged with lawyers who are friends of their family. They’ve been used to engaging with people in that way through their education system. They’ve probably been more likely to have gone to an Oxbridge university, and again, all those things build up a way of behaving that does project confidence.”⁴⁰

The encoding of apparently neutral characteristics of “merit” or “talent”, “drive” and “commitment”, with middle-class qualities, and experiences that are easier for middle-class applicants to access, goes some way to explaining the pervasive and long-standing nature of structural inequalities in the legal profession. In addition, the United Kingdom’s outcome-focused regulatory regime has relied on the legal profession to “heal itself” by improving equality and diversity. This approach implies that rational economic actors will, over time, overcome irrational preferences for “like to recruit like”. Organisations will recruit individuals with different characteristics and backgrounds, because organisations with diverse staffing bases have been shown to be more successful.⁴¹ But this hands-off regulatory approach has faltered, perhaps in part due to the global economic climate. Although there are talented applicants outside the pool of students in elite universities, those universities provide a large pool, and it is easier and, therefore, cheaper to recruit from that pool. Given the volume of applications, initial screening on A levels is seen as a quick and practical indicator of intellectual ability. Good candidates in other universities are geographically and educationally disparate, and recruiting the right candidate would take longer and be costlier. Employers certainly did not see an urgent commercial case for diversity in recruitment contexts⁴² and were not persuaded that, on balance, it would be better for business:

“I’m not sure the law firms are sufficiently focused on taking a risk on people. I mean, they interview people who aren’t from professional backgrounds, didn’t go to these private schools, etc. They just seem so much less impressive.”⁴³

“We do see the problem and for us it boils down to a budgetary one, being frank about it ... is there a diamond in the rough out there at University XXX? Is there a diamond out there? ... statistically it’s highly probable but the question is ... how much mud do I have to sift through in that population to find that diamond? A reasonable amount ... we’ve got a finite resource in terms of people hours and finite budget in terms of costs to target there.”⁴⁴

More proactive stimulus is therefore needed to secure progress towards greater equality and diversity in the professions.⁴⁵ In particular, as the Social Mobility and Child Poverty Commission concluded in 2012, specific diversity barriers must be tackled, namely the cost of training, the use of high school grades as a primary selection criteria, the significance of prior work experience in recruitment decisions and recruitment from elite universities.⁴⁶ Barriers to career progression require similar proactive approaches.⁴⁷

To summarise, although women’s access to the legal profession outstrips that of men at entry, career progression is not equal. Those from a BAME background are able to enter the legal profession, but are disproportionately represented in its more precarious firms. Both women and those from a BAME background earn, on average, 20 per cent less than their white male counterparts in the legal profession⁴⁸ and are similarly struggling to achieve partnership at a rate commensurate with white male solicitors.⁴⁹ Similar patterns are found at the Bar.⁵⁰ Entry into the legal profession is dominated by those from “elite” universities. Those educated in private fee-paying schools, rather than the state sector, disproportionately dominate senior legal posts in both private practice and the judiciary.⁵¹ Most significantly, students from lower socioeconomic backgrounds find it much harder to access the legal profession in general, to progress within it and particularly to secure the top legal jobs.⁵²

Our student cohorts and key motivations

The original project designers were particularly motivated by the significance of socioeconomic background to entry into and career progression within the legal profession. UCLan is a large post-92 university in the North of England. 50 per cent of UCLan students come from homes with an income of £20,000 or less, that is, from low-income families who qualify for state welfare support.⁵³ These figures are replicated among UCLan law students,⁵⁴ almost 50 per cent of whom are from low socioeconomic groups. UCLan Law School has almost double the national average of students from neighbourhoods with lower than average participation in Higher Education. It also has more than double the national average of BAME students. The patterns of disadvantage outlined above, particularly at the intersection of social

class and ethnicity,⁵⁵ were a key motivation in setting up the project.

Northumbria Law School's⁵⁶ BAME population is significantly smaller. 80 per cent of its students identify as white, 12 per cent as Asian and 2.5 per cent as Black. Three quarters attended a state school.⁵⁷ Half of the undergraduate cohort are first in their family to university. 40 per cent of Northumbria law students describe themselves as working class, 30 per cent as middle class and 2 per cent as upper/ middle class. The remaining 28 per cent either did not respond (18 per cent) or reported a mix of various combinations, perhaps reflecting some of the difficulties around social class in the contemporary United Kingdom.⁵⁸ A significant motivating factor for Northumbria Law School stemmed from a growing appreciation that the relatively high proportion of its white, state-educated, working class students, also geographically isolated in the North East of England, would undoubtedly experience disadvantage in entering the legal profession.

Sheffield Law School⁵⁹ has around 1,000 undergraduate students, including 100 visiting students each year, mainly on the Erasmus programme. 80 per cent of law students completing their degrees in Sheffield are UK nationals, 5 per cent are from another European Union (EU) or European Economic Area (EEA) country, and 15 per cent are nationals of other countries, principally Malaysia, Singapore, China, Hong Kong, India and Canada.⁶⁰ The UK students self-reported as 2:1 coming from the North of England,⁶¹ with 10 per cent of Sheffield law students from "low participation neighbourhoods".⁶² The relatively high proportions of non-UK nationals, coupled with the backgrounds of the UK nationals, was a key motivator in Sheffield Law School joining the project: in addition to redressing socioeconomic and perceived geographical disadvantage, it was felt important to develop cultures of mutual understanding and respect among the very different backgrounds and cultures represented among the undergraduate cohort.

In all three law schools, female students outnumber male students, by a ratio of approximately 2:1. One of the key aims of The Fairness Project is to address disadvantages to women seeking to become successful members of the legal profession in England and Wales.

The Pedagogical Design: Affective Learning Domains

The nature of The Fairness Project and our aspirations for its impact led to a careful design of the environment experienced by students as they progress through the stages of learning involved in the project. Our pedagogical approach is informed by Bloom's⁶³ classification (and developments thereof⁶⁴) of learning objectives into three domains: cognitive, affective and psychomotor.⁶⁵ The Fairness Project encompasses some elements of the cognitive domain⁶⁶ but is mainly positioned within the affective learning domain. Affective learning concerns feelings, attitudes, values and motivations.⁶⁷ In theory, affective domain learning objectives are satisfied when students move through five hierarchical "phases" from simpler behaviour at the beginning (receiving and responding to information) to the more complex end point where students' values, attitudes or interests are affected by their learning. These stages are categorised as receiving, responding and valuing organisation and, finally, characterisation.⁶⁸ We augmented the stages to incorporate forms of experiential learning,⁶⁹ particularly drawing from reflective practice.⁷⁰ In practice, students' progress will not necessarily follow the linear model and may move within those hierarchies multiple times within a learning experience, and beyond that immediate experience, as they continue to process their learning thereafter.

In its practical realisation, The Fairness Project is experienced by students as a series of learning tasks, beginning with receiving and responding to information, proceeding through organising, evaluating and characterising that information and culminating in personal reflection, with an invitation for further action. Each of the three law schools delivers the project in slightly different ways, but the core of learning and the materials used remain the same across all three law schools. At UCLan, it is delivered in the form of two small group (c12–16 students) workshops as an integrated part of a compulsory year 3 skills module. Similarly, at Northumbria, it is delivered in the form of two small group (c16–18 students) workshops, but as an integrated part of a compulsory year 1 employability module. In Sheffield, students begin with individual-guided tasks, meet in peer groups (c15–20 students) for initial discussions, have some feedback in a small-group personal tutorial (c7 students) and finally meet as a year 2 cohort (c320–400 students) in a workshop. Details of the project's core learning materials are reproduced in the Appendix.

Receiving and responding to information

This phase of the project uses students' research skills to draw out understandings of the contemporary nature of the various branches of the legal profession in England and Wales (and in the case of Sheffield Law School, where students are invited to research another jurisdiction if they wish, in their comparative contexts). Equipped with this information, students begin to form an awareness and understanding of where each of them sits in the market in which law graduates must compete for employment. Students gain some insight into how their profile and experience are likely to be understood in that context. Students are thus "receiving" information, in the sense that they are becoming aware of the contextual landscape we outlined above. They are also "responding" to that information.

In order to realise the objectives of the affective domain, we engage students in active cognitive processing,⁷¹ by using inquiry-based learning.⁷² Inquiry-based learning⁷³ is a form of inductive teaching,⁷⁴ where students are presented with a puzzle, challenge or series of questions to be answered, or data set to be interpreted. Inquiry-based learning is driven by questions or problems, is focused on the learners (teachers act as facilitators) and is inspired by self-directed, student-centred learning⁷⁵ and student-held responsibility for learning outcomes, including developing reflective practice.⁷⁶ Students are equipped with skills to investigate a puzzle or challenge, work out the answers to questions posed or determine how to interpret a data set. When using inquiry-based learning, students must pay attention to relevant incoming information, from their own and peers' research; organise that information into coherent representations to communicate it to the group; and integrate that information with their existing knowledge. Even at this apparently lower affective domain, higher order skills, especially reflection, begin to be engaged.

This kind of learning is apt for The Fairness Project, because where students discover the data on (lack of) equality and diversity in the legal profession for themselves, through a guided collaborative research task, they are much more likely to respond to the information and reflect on its meaning and significance — both personally and at a professional level — than if a set of facts and statistics were to be delivered by teachers in a "traditional" didactic lecture style. The resultant student learning is deeper and more meaningful.⁷⁷

The Fairness Project secures a balance between, on the one hand, scaffolding student learning (the students are undergraduates, in years 1, 2 or 3 of their studies) and, on the other, offering opportunities for students to construct their own knowledge. In this regard, the project is mindful of criticisms of minimally guided approaches⁷⁸ and seeks to provide sufficient structure so that, as well as "receiving and responding to information" about the subject, students develop "soft skills" including collaboration, peer learning and independent research.⁷⁹ Coincidentally, the project models the connections between research and teaching, associated with improved learning outcomes in Higher Education.⁸⁰

In practice, this pedagogical design means that the first task students are asked to tackle is to establish answers to some specific staff-set questions on (lack of) equality and diversity in the legal profession. The questions are found in Table 1 in the Appendix. Students conduct their research collaboratively, in a real-time workshop (UCLan and Northumbria) and in advance of the workshop, where they pool their efforts (Sheffield). While the research element of the exercise is not unduly complex, it does create some challenges for students in terms of making decisions on reliability and credibility when faced with a multitude of potential sources of (online) data. This aspect of the research task may be particularly challenging for first year students involved in the project. Further, students at all levels may find it difficult to grasp that different methodologies for measuring aspects of equality in the legal profession will lead to the formation of data sets that give different answers to apparently simple, measurable questions (such as "What percentage of partners or managers in law firms are women?"). However, the complexity of the research task does provide an opportunity for the workshop facilitator to offer advice on how to critically evaluate the validity of the myriad of sources easily available to students: a useful exercise for navigating future research. Following on from that research task, a whole group discussion provides an opportunity for the facilitator to work through the answers that the group have found, evaluate the sources upon which they have relied and provide a transition to wider discussion and reflection through any observations, questions or other points that arise.

Organising and evaluating information

The second phase of the project moves to the valuing, organising and, to some extent, characterising domains. The aim of this phase is to prompt students to consider an apparently neutral set of criteria for the selection for a trainee solicitor role, in the context of two fictitious profiles of applicants. We use a simulated recruitment exercise, conducted in a workshop setting. This task is relatively neutral and non-threatening as, although it requires students to identify potential diversity barriers and deficits to be rectified, it deals with fictional characters at arm's length. Working in groups, students role play having responsibility for recruitment of a suitable candidate for a training contract in a local firm.⁸¹ To support this decision, they are given a person specification for the role and the curriculum vitae of two prospective recruits. Students are invited to articulate whom they would choose and, crucially, to give reasons for their decision.

In drafting the role play recruitment exercise, we drew on the literature above to encode into the scenario various aspects of “merit” or “talent”, as used by the legal profession in making recruitment decisions.

The person specification is drafted so that it reflects how law firms attempt to construct “an employable graduate identity”.⁸² Very little of the text concerns what are known as “hard currencies” within employability narratives (measurable experiences and achievements).⁸³ In that regard, the person specification refers to only educational characteristics (“a 2:1 from a reputable university”). There is no reference to secondary education.⁸⁴ The majority of the job specification concerns the “soft currencies” of personal skills, such as interpersonal skills, charisma, appearance or accent.⁸⁵ As employers screen a large number of candidates for trainee positions in law firms, the “soft currencies” have assumed greater significance than in the past, and the “rules of the game” for entry have become increasingly personalised.⁸⁶ In that context, having the “correct cultural capital”⁸⁷ becomes more important, because of the extent to which evidence of promise of productive personal/professional relations between lawyers-to-be and their future clients underpins key decision-making in recruitment contexts.⁸⁸ The job specification in The Fairness Project refers to ability to participate in marketing and networking; confidence in dealing with clients and ability to earn their trust; and ability to make a valuable contribution to the firm. The specification can thus be read to imply unspoken assumptions about the firm and its clients. All of these embedded elements of the role play lead the students to think that the law firms are looking for “a particular type of person”, even though that “type of person” is never expressly articulated, and in fact a different type of person can be defended on the basis of the written text in the job specification, differently interpreted.

Likewise, the two curriculum vitae are written to encode implied gender and ethnicity (the candidates are called Mohammed and Rebecca/Natalie⁸⁹), as well as social class (for instance, Mohammed has a strong regional accent and worked in his father's local business; Rebecca/Natalie's hobbies include horse riding and she volunteered in Kenya for six months during a gap year). Aspects of each candidate's profile can be interpreted as expressing or exemplifying the “soft currencies” in the person specification: “confidence”, “work ethic”, “commercial awareness”, “legal experience”, “future commitment to the firm” and so on. The profiles are carefully written, so that each aspect of the specification can be found for each prospective candidate: whatever decision a student wants to take during the role play can be supported from the evidence.

As they undertake the task of organising and evaluating the information presented in the person specification and the curriculum vitae, students invariably make assumptions about the information that is presented. Students regularly refer to the candidates' A levels, and the schools they attended, even though secondary education is not mentioned in the person specification. The question of whether Mohammed has attended “a reputable university” (a local post-92 university is indicated) is always included in the students' discussion. No student so far undertaking the exercise has ever questioned whether Mohammed is in fact white: all assume he is a BAME student.⁹⁰ Students invariably reason that Mohammed's regional accent will count against him. These responses to the regional accent confirm that speech continues to be an important signifier of class⁹¹ and consequently a proxy for lack of “talent” or “fit” with a law firm's needs. The law firm's clients are usually constructed as being middle class, or at least as expecting to use the services of middle-class lawyers, although neither of these assumptions is usually made explicit. Further, students often consider whether the fact that Rebecca/Natalie is a woman, her age and that she is from the south of England would count against her “future commitment to the firm”. Students are generally aware that it is unlawful to discriminate directly against a woman

candidate, but they do consider whether Rebecca/Natalie will take maternity leave shortly after the firm has invested significantly in her during the training contract and may choose to move south at that point to be closer to her family.

The choice of role play is justified by the deeper learning that students are able to experience by imagination and empathy, compared to being presented with the findings of the literature in a traditional didactic format. Through the evaluation and organisation phase of affective domain learning, students begin to realise, possibly for the first time, that various characteristics, particularly when they intersect, can have a detrimental impact on an individual's future prospects within the legal profession. For some students, particularly those who experience the workshop in their first year, this is the first realisation that their law degree alone will be insufficient to take them into a career-entry role in the legal profession. Before experiencing The Fairness Project, many of our students have not given much consideration to the extent to which law firms use social and cultural capital as indicators of success and future "promise", and that law firms seek to recruit candidates who demonstrate all aspects of personal capital⁹² (including education, voluntary and work experiences, family connections) favoured within "elite" recruitment.⁹³ The role play helps students to begin to question their (probably unspoken and definitely incorrect) assumption that all students who are completing a law degree will have equal access to a career in the profession.

Further, students begin to understand that what might appear to be reasonable, objective and unbiased job requirements — ability to network; earn the trust of clients; be confident in dealing with clients and so on — are not equally easy for all candidates to demonstrate. The ability of each of the two fictitious candidates to show these attributes in a way that is understood by those making recruitment decisions is influenced by the recruiters' own cultural and social background and the assumptions they make about gender, ethnicity and social class, as they interpret the two profiles as outlined in the curriculum vitae.

In undertaking the role play, students must "organise" their personal value systems into priorities, before ultimately adopting certain behaviours and attitudes in the "characterising" domain. Students must move through the learning hierarchy from listening to others; responding; articulating their values; displaying analytical objectivity, fairness and balance (assuming that those qualities are part of their value systems); and adjusting their judgment and behaviours in the light of new evidence.⁹⁴ The ways in which students grapple with the nuances and challenges that inevitably arise (including where their personal values or preferences conflict with their understanding of the real world, including what they learned from the research exercise) are messy and unpredictable. Students sometimes step in and out of role during the workshop, expressing tensions between their personal values and those they perceive to belong to the legal profession. It is not always easy for the facilitators to keep the students on task, especially when they seek to express strongly felt views: "I wanted to pick Mohammed, but I knew that the firm would pick Natalie in real life. That's so unfair." But the benefits of learning within the affective domain outweigh those challenges, especially when the final part of this phase is considered.

Following the role play, the workshop facilitators use a Socratic questioning method, designed to draw out the reasoning on which students' decisions with the role play were based. In the discussion which follows, facilitators challenge the bases of these reasons. This is not difficult to do, given the way that the person specification and the curriculum vitae are encoded: every aspect of the person specification may be supported by evidence from each fictitious candidate. A decision to choose one candidate over another can therefore readily be shown to be based on more than "the bare facts", but on a set of assumptions about the written texts brought by the students within the role play. The discussion aims to draw out the ways in which students themselves, when acting in role, express the views of recruiters into the legal profession. It shows students how apparently neutral criteria ("merit", "talent") can be more readily met by some types of candidates than others.

During the role play, students also invariably identify themselves with one or more aspects of the fictitious characters. Each student begins to see more clearly how her or his profile might appear to a future employer. Students begin to bring together the first phase of The Fairness Project, and what they learned about (lack of) diversity in the legal profession, and its second phase. They begin to enter into a deeper reflection on the findings of their research, by considering what reasons might explain that lack of diversity. By making emotional responses explicit during the discussion part of this phase, facilitators are able to draw on affective learning modes to deepen these responses. Students began to process their behaviours within the affective domain at the more complex end of the learning hierarchy. This leads to the third phase of The Fairness Project, which takes place in "characterising" and "reflecting" stages of

affective learning.

Characterising information and reflecting on learning

In the final phase of The Fairness Project, we seek to encourage students to characterise the behaviours they encountered during the role play, in the context of the research exercise, and to reflect on what they have learned. No student wants to characterise their behaviour or values as unfair, or inconsistent with treating people equally according to “merit” or “talent”. But in this final phase, students are encouraged, through the discussion following the role play, to begin to understand the ways in which they themselves relied on various assumptions when carrying out their roles as recruiters within the legal profession and how “neutral” notions of “merit” and “talent” are understood. Furthermore, and most importantly, students begin to situate their own profiles within the processes about which they have learned through the workshop. By reflection on a comparison between their own curriculum vitae and those of the fictitious characters in the workshop, students begin to realise what the reality of recruitment in the legal profession means for each of them, as individuals with their own social and cultural capital.

The Fairness Project inculcates a recognition that students from less well-off, non-middle class backgrounds, with no personal contacts with the legal profession, are significantly disadvantaged compared to others, especially where personal characteristics of gender or ethnicity (or both) also implicate disadvantage. Of course, each student will experience and respond to the project differently, depending in part on their own place in the social order of recruitment to the legal profession.⁹⁵ But as a majority of our students, taken across all three institutions, are in that disadvantaged category (and by definition none are at Oxbridge, so all are subject to some disadvantage), the project needs to go further to offer strategies for how students might nonetheless navigate that environment and take advantage of those opportunities that do exist.

Fairness Project Strategies

Our experience of running The Fairness Project is that some students find it discouraging to realise, perhaps for the first time, the extent of the challenges that they may face in accessing graduate legal employment. This realisation can be particularly damaging where the new awareness of the potential barriers significantly undermines students’ confidence, as confidence and self-belief play a crucial role in employability.⁹⁶ However, we would argue that to let them continue in misconceptions of the legal recruitment market is potentially even more detrimental. It will be more difficult for our students to overcome a loss of confidence after graduation, outside of the network of support systems available in universities: better to ensure that students encounter a “reality check” during their studies. Further, to obfuscate our students’ place in the market for trainee lawyers also potentially places us, as academic staff, in an ethically compromised position, where we may find ourselves promulgating employability advice that is misguided at best and deceptive at worst.

Therefore, the process of raising student awareness of professional diversity barriers engenders a further moral imperative for us, as educators, to work alongside students in developing constructive strategies to tackle such barriers as realistically and effectively as possible. There is already a plethora of employability advice and guidance available to most law students from within their Law Schools or, more generally, from University Careers Services. However, part of the wider ambit of The Fairness Project is to move beyond generic employability strategies, to more critically aware and tailored approaches. Such approaches seek to encompass the individual career goals of our students, while acknowledging their socioeconomic status, gender identity, ethnicity, cultural background, sexuality, disability and so on and the intersectionality of such attributes for many of them. Any employability strategies must remain firmly rooted in an explicit recognition of the contextual bias of the current legal recruitment market in order to be meaningful and effective: “it is not enough to make [students] employable unless they become employed”.⁹⁷ The Fairness Project seeks to raise student awareness, while providing realistic hope and practical guidance on ways in which to navigate the terrain successfully.

In this regard, one of the key elements of The Fairness Project, compared to more generic employability strategies, is its compulsory nature. Those students who opt out of employability advice and guidance are often those who most need the support. Many law students will self-select out of the

recruitment processes for training contracts, daunted by the “mixed messages from firms”.⁹⁸ By requiring all our students to experience the learning involved in the project, we seek to provide a learning environment within which students can develop motivation and perseverance.⁹⁹ We recognise that this is far from an easy process, and the learning experiences of The Fairness Project are bound to be more effective for some students than others. Moving through the lower levels of the affective domain, receiving and responding to difficult employability messages, assimilated into supportive workshop environments, students are enabled to move to the higher levels of organising, valuing and characterising their knowledge and understanding.¹⁰⁰ Students are supported in how to reflect and effectively respond to a challenge to their understandings of the world (it is not the case that all law students have an equal chance in the legal profession), without being paralysed into inaction by the realisation (I might as well give up my career aspirations now). Rather, students are encouraged to act purposively and judiciously.¹⁰¹

Role models

The importance of raising aspirations is an integral part of government policy relating to the social mobility agenda in the professions generally.¹⁰² The extent of diversity barriers within the legal profession makes aspiration-raising even more pertinent in that context.¹⁰³ A significant proportion of the students who participate in The Fairness Project come from backgrounds where they may have little social or cultural capital, particularly for pursuing a legal career.¹⁰⁴ For these students, it may be especially challenging to envisage what a legal career might entail; what entry routes into the profession exist; what types of work may be available; and what knowledge, skills, attributes and “polish”¹⁰⁵ may be required.¹⁰⁶

Providing positive role models is one important element in raising aspirations and confidence in prospective future lawyers. We can provide some modelling of successful professionals in our own practice: all of us are women. But to go further, in recognition of this, we incorporate into The Fairness Project the Law Society’s “Solicitors for Social Mobility: the Ambassadors’ initiative”.¹⁰⁷ The initiative has been running since 2015, and each year the Law Society selects successful lawyers from a diverse range of backgrounds (in terms of ethnicity, gender and socioeconomic status) to act as Ambassadors. We ask students to choose one of the Ambassadors, to listen to her or his story and then to reflect on how this role model might inspire them individually. We anticipate that this resource will become increasingly valuable as the number of Ambassadors grows year on year, giving students from all backgrounds and circumstances a wider selection of role models with whom they can identify. A particular advantage of the Ambassador Scheme is that it demonstrates tangibly how people have successfully navigated diversity barriers that the students themselves may face.

The Fairness Project has also served as a catalyst, improving levels of staff awareness of professional diversity barriers within our Law Schools and contributing to a more contextualised employability culture. The support of Heads of School has enhanced this effect. At all three participating law schools, the project is delivered as a part of core teaching by a large teaching team, giving many staff the opportunity to explore the issues raised alongside their students and reflect on what it means for their professional practice. Concrete examples of corollaries of this shift in culture include a more intentional approach to select guest speakers so that they better reflect the demographic profiles of our student bodies and/or demonstrate visibly different successful lawyers and choosing images for our Law School corridors (and our online presence) that represent both law students and legal professionals from a more diverse range of backgrounds.

Knowledge is Power

It is important to understand the employment market into which you wish to progress. This is the case for all law students, but knowing a particular professional sector may be easier for some than for others. Law students from more privileged backgrounds often have high levels of social capital in terms of professional contacts generally and exposure to the legal profession in particular.¹⁰⁸ Those who attend the more selective Higher Education Institutions may have less need of a detailed knowledge of the market, as it is a standard practice for high-profile law firms to come to them, through structured recruitment schemes involving University partnerships, regular visits, networking opportunities and

mentoring.¹⁰⁹ Access to work experience, and the ability to benefit from such opportunities, is not always a level playing field.¹¹⁰ It is therefore particularly important for those students to whom the market is most closed, first to understand the systemic nature of these barriers and second to have access to tangible market intelligence designed specifically to give them traction in competing in such a challenging environment. The Fairness Project seeks to do so through raising student awareness of four specific purposive strategic actions students may take, empowered¹¹¹ by the knowledge inculcated through the project.

First, students may actively seek out law firms which are operating or experimenting with blind and contextual recruitment processes. These processes are designed to remove some of the inherent biases from recruitment decisions, with a view to identifying applicants with the most potential. Such blind and contextual recruitment processes have become more prevalent in recent years, particularly as the social mobility discourse has gained some credence.¹¹² At the more sophisticated end of the scale, some of the highest profile law firms use contextual recruitment services based on wide-ranging sources of data and complex software.¹¹³ However, the Law Society is promoting both blind and contextual recruitment across the sector more widely.¹¹⁴ For students from less privileged backgrounds, it can be particularly valuable to know or to ask which firms operate such recruitment practices as it potentially enables those students to access posts that might otherwise not be open to them (or, perhaps as importantly, which they perceive might not be open to them).

Second, and relatedly, there are a range of diversity schemes both specific to the legal profession¹¹⁵ and generic to the wider employment market.¹¹⁶ The Fairness Project workshops provide a forum to prompt students to learn about such schemes and identify any that may be particularly suited to their circumstances. We also signpost a range of external professional networks (particularly diversity and alumni networks) that may be of benefit to our students, either now or in the future.¹¹⁷

Third, looking at the recruitment practices of law firms realistically can support students in effective strategies that do not expend time and effort fruitlessly. In particular, armed with the knowledge that many regional, national and international law firms sift on A-level grades,¹¹⁸ students can avoid applying to law firms which do so, which would mean an application would fail through the operation of software algorithms before even reaching the desk of the recruiting team.

Fourth, students' reflections on how their profiles may be perceived in recruitment contexts may prompt them to improve those profiles, either through gap filling or through presenting the information in ways designed to enhance the chance that it will be read as embodying the sought-for qualities favoured in elite recruitment. The Fairness Project explicitly invites students to reflect on how they might improve their curriculum vitae, through reflecting on how it may be perceived. Further, students may, for instance, consider developing interview skills by modifying their spoken register, or even their accents, to express themselves in ways that will be understood as more "suitable" for a legal career.

Career trajectories and strategies: one size does not fit all

In prompting and supporting individual reflection and action, The Fairness Project offers an individual, strategic and critically informed approach to each student's career aspirations.

For instance, we encourage students to consider how they might move flexibly up the career ladder, designing step-by-step plans to reach longer term goals, and being ready to respond flexibly to changing needs within the profession. For example, a student at Lancashire Law School, with BCC at A-level, may aspire to be a partner in a corporate department in a national firm. It is almost impossible that she/he would be able to access a training contract with this firm on completing their Legal Practice Course. However, such a student may do very well at University, taking opportunities to volunteer in a pro bono Law Clinic or competing in skills competitions, alongside building professional networks. On completing the academic stage of training, the student may access a paralegal position in a local firm that allows her or him to develop expertise and professional contacts that serve well in applying for a training contract either within that firm or elsewhere. At the postqualification stage, it should prove easier to move diagonally from local firm, to regional firm, to national firm, should reputation and billing merit such progression. Given that some law firms would never consider applicants from a post-1992 University, an alternative strategy for such applicants may be to undertake a LLM in a Russell Group University prior to applying for training contracts.¹¹⁹ In any event, maintaining awareness of the fluctuations in areas of legal practice can also provide opportunities for pro-active advancement. The Fairness Project seeks to ensure that students are aware that the traditional "linear career system" is transitioning into a

“multidirectional career system”¹²⁰ and to prepare them for this accordingly. The Fairness Project recognises the significance of intersectionality¹²¹ in attempting to address the multilayering of diversity barriers that make it more difficult for some students to access graduate employment in the legal profession than others. Some students may face more than one professional diversity barrier due to an intersection of their social identities: students from low socioeconomic backgrounds with disabilities, Asian female students and so on. The role play and follow-up involve students judging the relative merits of fictitious students who have multiple diversity barriers and considering their own profiles, identifying the intersectionality of their social and emerging professional identities, linking these to potential career barriers and considering any deficits in their education, skills and experiences, and their social or cultural capital. While recognising that it is not equally easy for all students to do so, we point students to opportunities during their university experience to rectify any such gaps in their profiles, for instance by seeking out specific skills training in oral or written skills; expanding networks by joining local law societies or chambers of commerce and participating in the myriad networking, volunteering, pro bono work and other employability opportunities open to them within our Law Schools and universities.

Beyond providing a catalyst to “gap filling” in terms of their profiles, however, The Fairness Project inculcates an “assets-focused” model¹²² of personal identity formation. For at least some of our students, The Fairness Project will facilitate the development of the highest level of the affective domain, characterisation.¹²³ In order to learn in the characterisation domain, students must practise self-reliance, commitment and resilience. In carrying out this exercise, we are inviting students to explore notions of “possible selves”¹²⁴ by subtly asking students to imagine what they could become. Getting students to imagine themselves as lawyers and where they might see themselves “fitting in” to the legal profession at some future point in time is a valuable exercise in itself.¹²⁵ Yet, the project firmly grounds such an imaginative exercise in the objective reality of each student’s own career prospects.

The project encourages students to expand the range of “possible future selves” within their imaginary capacities. Such an imagined future self is essential for the formation of a “habitus”, which enables an individual to function within a particular professional field.¹²⁶ Beyond merely imagining such future identities, students are also empowered to “package” that “self”, so that each element of self, and the hard and soft currencies of employability, come together, in the “perfect manifestation” of educational achievement, skills and experience and personal, social and cultural capital which is so valued by employers.¹²⁷

Finally — (potentially) breaking the cycle in the future

Finally, The Fairness Project seeks to make at least a potential contribution to breaking the cycles of “merit”-based perpetuation of advantage and consequent lack of diversity in the legal profession. The project seeks to inculcate in students an understanding of how recruitment processes operate, to encode advantage and exclude those who do not “fit”, without overtly discriminating on the grounds of gender, ethnicity or indeed other protected characteristics under the Equality Act 2010 or social class. That emergent understanding, especially for those students who access the reflective phases of learning through the project, invites students to seek future professional and personal development that helps them to uncover their own biases. Those of our students who become lawyers might — because they have experienced The Fairness Project — seek to adopt more inclusive practices than those to which they are currently subjected. Our hope is that, in the future, our students will access equality training, embody best practice in recruitment processes, notice and challenge coded notions of “merit” and, above all, continue to develop as reflective practitioners, aware of their own conscious biases and the fact of their unconscious biases, so that they might become fairer employers and managers in the future.

Conclusions

Structural inequalities in the legal profession are all-pervasive and long standing. Of course, no one project, no one generation, will secure equality, more diversity and fairness in the legal profession. But that is not a reason to do nothing. After all, just 100 years ago, not one of us would have had the job that we have within legal education. Societies do change, and they sometimes change towards greater equality, although the pace of change may seem to be glacially slow, and at times it may feel like “two

steps forward, one step back". The law is one vector of such changes; education is another. Without wanting to overstate the case, as legal educators, we thus stand at a unique vantage point in terms of the possibilities of our contributions.

Others have investigated and reported on the phenomena we describe above: access to the legal profession is no longer based on overt discriminatory practice, but structural disadvantages persist. We seek to go further than investigating the ways in which this is the case: we want to do something. Here, of course, as relatively powerful individuals within the university, we need to be careful not to participate in the very structures which we seek to challenge. The Fairness Project is based on our acute awareness that curriculum interventions which are insufficiently attentive to the ways in which gender, ethnicity and social class inform and interact with notions of legal "employability", "merit" and "fit" will be ineffective in helping our students realise their ambitions, supporting social mobility or enhancing diversity. The project's design begins from that realisation, and above all, it seeks to ensure that our students understand it too. If our students learn one thing from The Fairness Project, it is that the legal labour market is not a neutral sphere in which individuals succeed by virtue of their own inherent (academic and other) merits and efforts. Rather, gender, ethnicity, social and educational background play a key role in what appear to be neutral hiring and promotion decisions in the legal profession. Further, our students are in effect asked to think about how their gender, ethnicity, social and educational background might influence their life chances and how that might affect their future career destinations. Armed with that critical awareness, we offer a number of positive strategies, which we seek to tailor to each student individually, recognising that accessing such strategies in itself is easier for some students than for others. Our hope is that these strategies better equip our students to compete in the market for legal professional employment. In a small way, therefore, The Fairness Project pursues a grand ambition. It is seeking to intervene in and disrupt the perpetuation of unfair practices in the legal profession.

There are obviously some drawbacks of seeking to pursue such an ambition. The challenges of including equality and diversity in course content and of effectively delivering this kind of educational experience are well documented.¹²⁸ Any counter-cultural teaching and learning practices presents challenges. Most learning and teaching activity in law schools is firmly situated in the cognitive domain. The majority of law school staff thus tend to feel most comfortable in that world of clearly defined, articulated and assessable objectives. In contrast, the affective domain, with its non-linear, messy processes and unpredictable outcomes, may leave educators feeling at least somewhat exposed as they navigate their way through the more contentious world of feelings, attitudes and values. This may be felt particularly keenly by academic staff within this inherently difficult and potentially divisive subject area of diversity and equality, fairness and justice. That discomfort is shared by staff and students alike. We have certainly experienced it in our law schools, as we have used The Fairness Project in our respective curricular contexts.

However, teacher or learner discomfort in itself is not sufficient reason to avoid operating within the affective domain, particularly when its objectives so clearly align with this project and its aims and underlying ethos. As educators and as human beings, who ourselves are relatively advantaged, we feel a moral and pedagogical imperative to do what we can, where we are. That is what The Fairness Project is all about.

Appendices

Table 1: Initial Research Questions

Are there more women or men in the legal profession at the current time (excluding partners and other members of staff in law firms)?

What percentage of partners or managers in law firms are women? What is the gender pay gap for solicitors?

If 17 per cent of all solicitors in the biggest firms (ie, firms with 50 or more partners) are from black Asian and minority ethnic (BAME) backgrounds, what percentage of partners or managers in these firms are from BAME backgrounds?

What is the ethnicity pay gap for solicitors?

7 per cent of the UK population have had a private school education. What is the percentage of lawyers who have had a private school education?

What is the percentage of partners or managers in the top commercial firms who have had a fee-paying education?

What is the percentage of senior judges who have had a fee-paying education?

Table 2a: A Role Play Recruitment Exercise: Person Specification University of Central Lancashire

You are the recruitment partners in a rural Cumbrian law firm. It is a large and longstanding high street practice with a number of local branches: it specialises in property, private client and commercial/agricultural law. The firm is involved in a lot of local events such as agricultural fairs and National Union of Farmers events.

You are making the final decision with regards to the recruitment of a new trainee lawyer.

The “Person Specification” is attached.

Job title:	Trainee Lawyer
Reports to:	Supervising Partner/Senior Associate
Salary:	Not less than the Law Society minimum

Person specification

- The potential to develop the key skills and expertise required to be an outstanding solicitor including:
 - Legal and procedural knowledge. Proofreading
 - Attention to detail Communication skills Commercial acumen
 - Advocacy and presentational skills Case and time management Drafting
 - Practice support IT
 - Marketing
- A minimum of a 2:1 degree from a reputable university.
- Participate in the Firm’s marketing and networking strategies as directed.
- To become confident in dealing with clients and other professionals and to learn the ability quickly to earn the trust of clients and others in all dealings.
- To provide a valuable contribution to the work of each department to which the trainee has been allocated a seat, to assist each training principal with his or her daily workload and to provide practice support both departmentally and generally within the Firm.

You are the recruitment partners in a rural Cumbrian law firm. It is a large and longstanding high street practice with a number of local branches: it specialises in property, private client and commercial/agricultural law. The firm is involved in a lot of local events such as agricultural fairs and National Union of Farmers events.

Person Specification for Trainee Lawyer

- The potential to develop the key skills and expertise required to be an outstanding solicitor including:
 - Legal and procedural knowledge Proof reading
 - Attention to detail Communication skills Commercial acumen
 - Advocacy and presentational skills Case and time management Drafting
 - Practice support IT
 - Marketing
- A minimum of a 2:1 degree from a reputable university.
- Participate in the Firm’s marketing and networking strategies as directed.
- To become confident in dealing with clients and other professionals and to learn the ability quickly to earn the trust of clients and others in all dealings.
- To provide a valuable contribution to the work of each department to which the trainee has been allocated a seat, to assist each training principal with his or her daily workload and to provide practice support both departmentally and generally within the Firm.

Table 2c: Variant Sheffield

You are a recruitment partner in one of Sheffield’s medium-sized law firms. Your firm began as a small high-street firm but has grown rapidly over the last 10 years as more business has come to the city. You specialise in property and private client law and are deeply connected to the Sheffield community, but you are also dealing with wealthy clients very frequently.

You are recruiting a new trainee lawyer. This is a major investment in what is a relatively a small firm, and you need to make sure you get the right person. With the current economic climate, the wrong decision could spell the end of the firm’s success. You could even be out of a job yourself.

Job title: Trainee Solicitor

Reports to: Supervising Partner/Senior Associate

Salary: Not less than the Law Society minimum

Candidate Specification:

- The potential to develop key skills and expertise in the areas including:
- Legal knowledge and procedure. Proofreading
- Attention to detail Communication skills Commercial acumen
- Advocacy and presentational skills Case and time management Drafting
- Practice Support IT
- Marketing
- A minimum of a 2:1 degree from a reputable university Participate in the Firm's marketing and networking strategies
- Confidence when dealing with clients and the capability to build working relationships with them
- The candidate should be able to show a valuable contribution to the work of each department to which the trainee has been allocated a seat, the ability to manage his or her daily workload and to provide practice support within the firm

Table 3a: Curriculum Vitae (CV)s University of Central Lancashire

Both Mohammed and Rebecca have 2:1 degrees from universities in the North West of England. Mohammed went to Manchester Metropolitan University and comes from Nelson, a town with a higher than average black Asian and minority ethnic (BAME) population. Rebecca went to Liverpool university and comes from Clitheroe, a predominantly white middle-class town with a lower than average BAME population. Mohammed went to a local non-selective school and has B, B, C at A level. Rebecca went to a selective state school and has A, B, B.

Mohammed has worked part time for his family's business (student property rentals) since he was 16; he also has four weeks of work experience at his local *pro bono* advice centre and shadowed a local lawyer for a week during his third year. He decided he wanted to become a solicitor after his uncle was unfairly selected for redundancy three years ago. He is a keen footballer playing for a local team and mentors under 12 years olds on a Saturday morning. He is enthusiastic and personable; he has a strong regional accent.

Rebecca has undertaken legal work experience at a range of medium-sized commercial firms over the three years of her degree and has experience with a prestige Manchester firm. She is familiar with the legal profession as a number of family members are lawyers. She has wanted to be a member of the profession since she was young. She volunteered as a teaching assistant for six months in Kenya before university and interned with a British marketing company in their Frankfurt office after her third year exams. She is a keen horse woman. She is articulate, and the partners feel that she will connect well with clients.

Both performed well in individual and team tasks. Who should the firm recruit?

Features	Mohammed	Rebecca
Degree	2:1 from a post-92 university	2:1 from Russell Group University
School	Non-selective stateschool	Selective state school
Work experience	Worked in family business (student property rentals); four weeks' work experience at his local <i>pro bono</i> advice centre and shadowed a local lawyer for a week during his third year	Legal work experience at a range of medium-sized commercial firms over the three years of her degree and has experience with a prestige Newcastle firm; interned with a British marketing company in their Frankfurt office after her third year exams
Interests	Football (plays and mentors under 12 year olds)	Keen horsewoman and volunteered as a teaching assistant for six months in Kenya before university
Motivation to do law	He wanted to become a solicitor after his uncle was unfairly selected for redundancy three years ago	She is familiar with the legal profession as a number of family members are lawyers. She has wanted to be a member of the profession since she was young
Others	Enthusiastic and personable; he has a strong regional accent	She is articulate and the partners feel she will connect well with clients

Table 3b: Curriculum Vitae (CV)s Northumbria

Both Mohammed and Rebecca have 2:1 degrees from universities in the North East of England. Mohammed went to Northumbria University and comes from Nelson, a town with a higher than average black Asian and minority ethnic (BAME) population. Rebecca went to Newcastle University and comes from Clitheroe, a predominantly white middle-class town with a lower than average BAME population. Mohammed went to a local non-selective school and has BBC at A level. Rebecca went to a selective state school and has ABB.

Mohammed has worked part time for his family's business (student property rentals) since he was 16; he also has four weeks of work experience at his local *pro bono* advice centre and shadowed a local lawyer for a week during his third year. He decided he wanted to become a solicitor after his uncle was unfairly selected for redundancy three years ago. Table 3c: Curriculum Vitae (CV)s Sheffield

Mohammed Amir

Phone No. 07998877554 | Email. M.Amir150895@gmail.com

Study: Sheffield Hallam University: LLB Law, Second Class-Honours Upper Division (2:1)

College Education: Nelson College

<i>Subject</i>	<i>Grade</i>
Law	B
Sociology	B
English Language	C
General Studies	B

Secondary School Education: Owlerton High School

Employment History:

Amir's Student Rental Co. I worked part time at my father's business in Sheffield part time since I was 16 before I went to University. This involved photocopying documents and working on reception dealing with queries.

Work Experience:

Pro Bono Unit Sheffield I completed four weeks of work experience at my local *pro bono* unit in Sheffield city centre. I found this to be an eye opening experience and it inspired me to become a lawyer.

Volunteer Work:

Mentoring under 12-year-old football players. I am a keen footballer and have played both locally and for the School of Law. I spend my Saturday mornings coaching children under 12 years to play football.

Awards:

Dave Douglas Davidson Memorial Prize I won this award for showing outstanding development at college.

Natalie Eliza Smith

Phone No. 07999444651 | Email. N.E.Smith1@gmail.com

Study: University of Sheffield: LLB Law, Second Class-Honours Upper Division (2:1) Sixth Form Education: Bury St Edmunds Sixth Form

<i>Subject</i>	<i>Grade</i>
Law	A
Sociology	B
English Language	B
General Studies	B

Secondary School Education: Bury St Edmunds Secondary School Work Experience:

Lawyers “R” Us LLP: I undertook a week of work experience at this medium-sized firm in Cambridgeshire where I shadowed solicitors. I did this during the first year of my degree.

Firmly Law LLP: I undertook three days of work experience at this medium-sized firm in Cambridgeshire where I shadowed solicitors. I did this during the second year of my degree.

Sreywal Solicitors LLP: I spent two weeks completing a vacation scheme at this large international firm in Manchester at the end of my second year of my degree.

Marketing & Spencer: I interned with this British marketing company in Frankfurt. I enjoyed observing the kind of work they carried out and improving my commercial awareness skills while also experiencing life in a different country.

Volunteer Work:

Teaching Assistant in Kenya I spent three months working as a teaching assistant in Kenya after my graduation. This was out of my comfort zone but I soon was able to adapt and rose to the challenge.

Hobbies: Horse riding, writing for the student newspaper Socialising with my friends

Once you have read Mohammed’s CV, you need to reflect on some information taken from his interview, as well as your local knowledge:

Owlerton High School is a local non-selective school. 20 per cent of the students go onto further study.

He has a strong regional accent.

At Nelson College, he was in the top 10 per cent of students.

He comes from a part of Sheffield with a higher than average black Asian and ethnic minority (BAME) population.

He is the first member of his family to attend university.

Once you have read Natalie’s CV, you need to reflect on some information taken from her interview, as well as your local knowledge:

Bury St Edmunds Secondary School is selective state school.

Firmly Law LLP is a firm in which her father is a partner, and Marketing & Spencer is a company for which her older brothers have been working as their in-house lawyers.

She comes from an area which is predominantly white middle class and has a lower than average BAME population.

Table 4: Reflection on Your CV (Sheffield’s Personal Tutorial)

Your CV may look similar to one of these two candidates. We cannot escape where we come from and who we are. Some of us will have benefitted from having certain financial assurances or connections in the profession we want to move into. This does not mean one person is better than the other, nor does it mean that it was easy for someone in a more privileged position than someone else.

We will be discussing this further in the Workshop, but do discuss it independently in your tutorial group or with other people who are also doing WINS2.

What we should learn here is that we can turn apparent deficits into assets. Look back at the Takacs reading at task 2, and your answers to Question 1.¹²⁹

Remind yourself of the Takacs¹³⁰ reading above.

Individually, critique each of the two CVs in accordance with the job description. Annotate the CVs where you think the candidate could turn a deficit into an asset. Where could it be made clearer that an apparent disadvantage can be used to that applicant's advantage and make them a more appealing candidate?

What could Mohammed do to make it clear that he has excelled despite his background? Should he try to convey that in his CV? What other information should he add about himself, either about his time at university or outside of university?

What could Natalie do to make it clear that she has excelled despite already having connections in the legal profession? Where might she add to her CV to show that she has made the most of the opportunities given to her?

Completing this task will aid your preparation for your Tutorial where you will be critiquing and providing positive and constructive criticism on the CVs of your peers, and receiving valuable feedback on your own CV.

CV stands for curriculum vitae and can be roughly translated from Latin to "[the] course of [my] life".¹³¹ If you have never had a full-time or part-time job or have never volunteered then it may be likely that you have never needed a CV. You may have your CV but have not updated it since you arrived at the University.

By the time you have completed all the work on this topic, you will be in a stronger position to determine how to create a CV that is ideal for the jobs for which you intend to apply. At that point, you may wish to revisit your CV. For now, create or edit your own CV in light of your reading and reflection. Bring your CV to the Group Discussion and the Tutorial.

In the meantime, you may want to consider contacting Career Connect, which is part of our careers service. You can sit down and talk through your CV with a careers advisor and perhaps bring some advice to your tutorial for discussion.

- 1 Dissemination of *The Fairness Project* outside UCLan began at the Association of Law Teachers conference in 2016. Northumbria and Sheffield Universities expressed interest in sharing the teaching materials, and it was agreed to set up a three-way research project to evaluate the impact on students. Subsequent conference dissemination at the HEA Annual Conference and the SLS Annual Conference in 2017 has led to the sharing of materials with four further universities: Birmingham, Portsmouth, Liverpool and Wolverhampton. We do not have data from those universities at this stage of the project.
- 2 Britain officially entered recession on 23 January 2009 when the Office for National Statistics reported that the economy had shrunk through the last two quarters of 2008.
- 3 The Law Society, "Trends in the Solicitors' Profession Annual Statistics Report 2016" (16 June 2017) p.4.

- 5 Chambers and Partners, "Law Firms Preferred Universities" *Chambers Student* (February 2016), available at <http://www.chambersstudent.co.uk/where-to-start/newsletter/law-firms-preferred-universities> (visited 23 October 2017). At the same time, Hervey et al at the University of Sheffield became aware of the declining number of students from Sheffield securing training contracts. This was particularly visible when several of the top "magic circle" London-based law firms ceased their recruitment activities in Sheffield. It was discovered, for instance, that one such law firm had not recruited a student from Sheffield to a training contract for over a decade.
